

Netensured, LLC “Flexibility to meet any IT needs”

Netensured is proud to offer small and medium-sized companies the ability to have their vital systems backed up offsite, an important insurance policy for a minimal cost! As the business world has come to rely heavily on computer software to operate, many companies have not established a vital disaster recovery plan in the event of data loss. Netensured is now offering a solution to fill this void in the growing number of small business networks, offering secure online backup services for customers of all sizes and types to their remote data center.

- *This service is non-intrusive to the customer’s network and will require no security holes to be open on the network.*
- *In the event of a disaster, Netensured will have your backups readily available for you to quickly begin getting your organization back in operation*
- *Our backup services are not only necessary in the event of disasters. Data loss can also occur from virus attacks, hardware failure, theft, or, most commonly, accidental deletion.*
- *Your backups will be encrypted before leaving your network and remain completely secure, meeting any industry security requirements, such as HIPPA or SOX.*
- *According to research by the University of Texas, only 6% of companies suffering from a catastrophic data loss survive, while 43% never reopen their doors and 51% close within two years.*
- *Gartner, an IT research company, estimates that only 35% of SMB’s have a comprehensive disaster recovery plan in place.*

In alliance with our online backup service, Netensured also offers a wide array of network consulting and management services. We can offer support to customers of all sizes in all industries. Netensured will work with your budget to give you the best possible system for your company to increase productivity and limit downtime.

Process your first year of backup services by April 30th, 2009 and receive 2 additional months **FREE!!**
